MEMORANDUM FOR THE RECORD

SUBJECT: Side File Security Cabinet Secure Storage Wall

1. Mr. Paul Cooper, Mosler Company, unveiled the prototype Security Side File to the undersigned. The hand crafted model was shown with varying colors for each of the five drawers and as such was rather striking. Mosler plans to show it to the rest of the community beginning next week. It appears to meet and Mosler claims it will exceed the requirements to be accepted on Federal Supply Schedules as a Class 6 security file.
2. Mr. Cooper was seeking data as to our possible usage of the safe, and he was advised that if accepted on government schedules then we would recommend its procurement in place of the conventional 4 and 5 drawer Class 6 safe at this time. He was also advised that we would use it in areas which we could office landscape, and if it proved feasible, <sup>as</sup> replacement of partitions when utilized in its original concept as the basic unit in the secure storage wall.
3. Mr. Cooper advised that add on items; e.g., storage unit above, wardrobes, and book shelves, at the present time did not conform to standard manufactured items in that standard depths are 18" and the safe is 20" deep due to drawer locking mechanisms; therefore, for uniformity standard items would have to be special orders.
4. Mr. Cooper stated he was considering ordering some models of items necessary to constitute a secure wall using a 1" to 1' scale with a five foot grid. He was advised that this would be of value to us in determining our needs, if any, in the future. Mr. Cooper stated that this decision would be made after determining the reactions of the rest of the community later this month.
5. Mr. Cooper made the offer to show the item to others of the Agency later this week, which offer was accepted for Thursday at 2pm.
